

To whom it may concern,

I am happy to provide a reference for Ronny Ahmed, who is a competent full-stack web developer with expertise in Python web frameworks and React.

During Ronny's vacation placement with Energy Queensland, I was impressed with his technical proficiency and ability to deliver high-quality, clean code, on time. He has a deep understanding of both Python and web technologies and able to apply this knowledge to create complex web applications that are efficient, scalable, and user-friendly.

Ronny's was challenged to develop a web application over large spatial datasets. He was responsible for designing and implementing key features such as SSO, geospatial searching, mapping visualization, real-time data processing and export. He performed his required tasks with minimal direction or supervision. His work was instrumental in creating an intuitive and powerful tool that allowed users to analyse key asset information, through visualising complex spatial data sets.

Ronny is also an excellent communicator, both verbally and written. He was able to clearly explain his solution and thought process during code review and the functional UX during the stakeholder showcases. This made it easy for team members to understand and collaborate with them effectively.

Overall, I highly recommend Ronny as a full-stack web developer with capable skills in Python and React. His technical expertise, attention to detail, strong communication skills, and ability to deliver high-quality code make them an asset to any project.

Kind regards,

David Koops
